Explore YOUR world independently or with a sibling or parent! Then show us what you find by sharing on social media (TAG @DIGIBRIDGEUS + use #STEAMSEARCH) OR emailing content@digi-bridge.org!

DIG DEEP

An earthworm's waste helps to fertilize the soil. Dig in the dirt and find a worm.

BONUS! Can you draw a map of where you found the worm? Estimate how deep it was located in the ground.

TIME TO DESIGN

Several plants, including vines, have weak stems but can grow up high with support from structures or trellises. Find a vine growing around your home. **BONUS!** What sort of trellis would you engineer to support a vine? Draw or build a model.

EAT THE RAINBOW

Edible parts of plant are called fruits and vegetables. Watch a video to learn how to tell the difference. [bit.ly/ssgardenvid]

BONUS! Name a fruit or vegetable that is each color of the rainbow (red, orange, yellow, green, blue and purple).

SEE THE SEEDS

Fruits have seeds. Slice a fruit in half (with an adult) and notice the seeds OR look at these photos and notice different seed sizes, shapes and placement. [bit.ly/ssgardenseeds] **BONUS!** Count how many seeds are inside your fruit and draw what they look like.

ALL ABOUT VEGGIES

Name three vegetables that you like to eat. Vegetables are usually roots, stems, leaves or flowers of plants. **BONUS!** Lay fresh or canned vegetables on a plant diagram to represent the parts of a plant they are. [bit.ly/ssgardenveg]
